15%
REDUCTION IN COSTS WHILE
INCREASING PERFORMANCE

OUR CLIENTS EXPERIENCE with **SPI**nspector

CHALLENGES

- Unintended data discrepancies in the database which prevent efficient SPI functionality.
- Users are unaware problems exist. Even when they do know, users don't have an action plan or the resources in place to correct.
- Users lack the ability to thoroughly verify the overall condition, quality or consistency of project data.

RESULTS

- Easy-to-use application provides proven search criteria to detect problems quickly.
- Inspection result data comes in an uncomplicated format which can be easily manipulated and edited.
- User-defined scope of inspection allows the tool to focus on a project and pre-emptively identify problems.

"SPInspector is an incredible SPI Administrator toolbox for identifying and eliminating issues before they become problems."

Kelcey C.
Project Lead

"Being able to use the computer to review for completeness and proper format of the data makes the review process more accurate and less time consuming, in addition to the project cost benefits."

Chris C.
SmartPlant Instrumentation Super User
